INDEX TO VOLUME 52

ARTICLES

Action Research in Junior High School, Lloyd M. Bennett, 321.

Affective Response to Different Media in a Multi-Media System, M. Daniel Smith, Herbert J. Walberg, L. Eugene Poorman and Morton Schagrin, 16.

Attitudes of Physics Teachers, Effects of a Summer Institute on, Arthur I. Rothman, Herbert J. Walberg and Wayne W. Welch, 469.

Autoinstructional Program in PSSC Physics for Small High Schools, An, Paul J. Cowan, 371.

Causal Reasoning in Science: 1937–1964, B. R. Joyce, H. M. Lahaderne and E. H. Joyce, 308.

Chemistry Precede Biology, Can and Should?, John Davison and Paul Geisert, 364.

Children's Sources of Scientific Information, W. R. Zeitler, 502.

Clarence M. Pruitt, N. Eldred Bingham, 419.

Classificatory Ability of Children Who Have Been Exposed to One of the "New" Elementary Science Programs, An Examination of the, Leslie R. Allen, 432.

College General Education Science: Classroom-Laboratory Facilities for a Program, Thomas P. Fraser, 463.

Combination Model of the Six Machines, Clarence M. Pruitt, 75.

Comparison of Achievement on a Test of Gardening Practices Between Students Who Have Had Summer Gardens, Those Who Have Had None, As Well As Between Students Who Have Had Only the Classroom Preparation But Not the Summer Follow-Up, A, Joseph Jackson and George Stuteville, 410.

Content Versus Process Centered Biology Laboratories, Part I: Foundations of Biology Education, Glenn W. Murphy, 142.

Content Versus Process Centered Biology Laboratories, Part II: The Development of Knowledge, Scientific Attitudes, Problem-Solving Ability, and Interest in Biology, Glenn W. Murphy, 148.

Creation, Evolution and the Bible, Panos D. Bardis, 43.

Curriculum Evaluation, A Design for, Wayne W. Welch and Herbert J. Walberg, 10.

Curriculum for Elementary Science Education, Evaluation of a, Edward Frankel, 284.

Dinosaurs and Dodo Birds in Higher Education: The Extinction of Instruction, Clarence H. Boeck, 233.

Ecological Medicine and Social Responsibility, Henry Winthrop, 473.

Educational Research and the Science Educator, Joseph M. Scandura and Judith Anderson, 353.

E. I.: Practicing What We Preach, Seymour Metzner and Pearl A. Nelson, 298.

Elementary School Biology Revisited, John D. Cunningham, 181.

Elementary Science Curriculum in New York City, The Degree of Implementation of the, Phyllis Richards and Patrick V. Quinn, 290.

Elementary Science, Implications of Structure for, Abraham S. Fischler, 277.

Elisha L. Fisher, Clarence M. Pruitt, 223.

Elwood David Heiss, Clarence M. Pruitt, 1.

Enquiry—A Critique, Darrell D. Young, 138.

Environment of the Child and Its Relationship to His Achievement in Science: A Theoretical Overview, The, Jerry S. Carlson, 23.

Evolution in Biological Education Prior to 1960, Cornelius J. Troost, 300.

Expanding the World's Resources, Donald F. Othmer, 119.

Experimental Programs on Elementary School Science, The Impact of, Shirley A. Brehm, 293.

Florence Grace Billig, Clarence M. Pruitt, 4.

Foreign Students in the United States and American Students in Foreign Countries, Institute of International Education, 414.

Geological Concepts for Intermediate Grades, Selection of, A. C. Ashbaugh, 189.

Giacomo Leopardi: Dialogue Between the Earth and the Moon, Rufus Suter, 450.

Giacomo Leopardi: Dialogue Between Frederick Ruysch and His Mummies, Rufus Suter, 454.

Guidelines to Aid the Teacher in Preparing Science Resource Units, Lloyd M. Bennett, 332.

Harvard Project Physics—A Cogent Approach, Arnold J. Moore, 337.

High School Chemistry Research Support Program Spurs Advanced Courses, Frank X. Sutman, 244.

Individualized Elementary School Science, Raymond J. O'Toole, 376.

Individualized Elementary School Science, The Effectiveness of, Raymond J. O'Toole, 381.

In-Service Institute in Retrospect, An, Jerry H. Davis, 345.

John Murwyn Mason, Clarence M. Pruitt, 313.

Lillian Hethershaw Darnell, Clarence M. Pruitt, 109.

Limitations of Science, What are the?, Michael J. Daley, 301.

Measuring Attitudes Toward Science, On, Patricia M. Schwirian, 172.

Mervin Elijah Oakes, Clarence M. Pruitt, 216.

Models and the Curriculum, Alfred De Vito, 457.

Modified Programming for Elementary Science, John R. Verduin, Jr., 167.

National Science Foundation Widened the Gaps in Science Education Among Urban, Suburban and Rural High Schools, Has the?, Donald W. McCurdy, 368.

Parental Responses Regarding the Attainment of Objectives of the Summer Gardening Program, A Summary of, Joseph Jackson and George R. Stuteville, 405.

Patterns of Implementation, John J. Montean, 316.

Perceptions and Self-Actualization: A Goal for Education and a Theory for Teacher Education, Richard D. Kellough, 47.

Pre-1960 Contributions to Science Education, J. Darrell Barnard, 239.

Present Relevance of Classical Conceptions of Time, Panos D. Bardis, 35.

Problems of Communication in Science Education, Henry Winthrop, 493.
Pushing Back the Boundaries of Ignorance, Clarence M. Pruitt, 303.
Research Study on the Values Gained from Dissection of Animals in Secondary School Biology, A, H. Seymour Fowler and Edward J. Brosius, 55.
Residuals from a Decade of Criticism, Herbert A. Smith, 225.
Science in the Programs of Educationally Deprived Children in Grades 7–9, A Demonstration of the Role of, N. Eldred Bingham, 246.
Science Laboratory Necessary for General Education Science Courses, Is the?, Robert L. Bradley, 58.
Science Manpower Project: Its History and Its Program, The, Frederick L. Fitzpatrick and Willard J. Jacobson, 256.
Scientific Method in the Elementary School, Implementing the, John R. Verduin, Jr., 162.
Self-Instructional Laboratory for Science Teachers, A, Eugene D. Gennaro and Clarence H. Boeck, 274.
Sex Differences in the Science Background Experiences of Elementary School Children, George W. Rowland, 179.
Sophopolis University and Faculty Party, Panos D. Bardis, 46.
State Supervisors of Science, A Survey of, George T. O'Hearn and Rodney J. Doran, 204.
Study of Curiosity Factors in First Grade Children, A, Rita W. Peterson and Lawrence F. Lowery, 347.
Success of Recruited Students in a New Physics Course, The, Wayne W. Welch and Arthur I. Rothman, 270.
Task Before Us, The, George R. Stuteville, 384.
Teacher Commitments in a Discovery Process, Alfred R. Binter and John A. Dewar, 103.
Teacher-Pupil Critical-Thinking Ability, Relationship of, Kenneth D. George and Sister M. Dietz, 426.
Teaching a New Physics Course on Teacher Attitudes, The Effects of, Arthur I. Rothman, 466.
Teaching of Science to Gifted Children, A Compendium of Methods for the, Pearl W. Schwartz, 130.
Teaching Selected Science Principles and Concepts in the Fifth Grade Contained in a Unit About Marine Animals, Lloyd M. Bennett, 66.
Tempus: A Program to Prepare Teachers for Urban Schools, Harold S. Spielman and David S. Sarner, 115.
Theresa Jane Lammers, Clarence M. Pruitt, 105.
Time Allotment and Services for Science in the Elementary Schools, A Survey of, Joseph Jackson and George R. Stuteville, 405.
Undergraduate Physiology Courses in State Universities, Some Current Practices, Raymond E. Henzlik, 439.
Understanding of Selected Principles of College Chemistry by Intermediate Grade Pupils, The, John S. Schrader, 196.
Understanding of the Nature of Science by Prospective Secondary Science Teachers, An Analysis of the, Russell L. Carey and Nyles G. Strauss, 358.
William Carlstead Van Deventer, Clarence M. Pruitt, 209.
Winifred Perry, Clarence M. Pruitt, 9.

BOOK REVIEWS

77, February; Inside Back Cover, March; 312, April; 416, October; 505, December.

AUTHORS

ALLEN, LESLIE R., An Examination of the Classificatory Ability of Children Who Have Been Exposed to One of the "New" Elementary Science Programs, 432.
